DESCRIPTION OF MAP UNITS AND SYMBOLS

A Tertiary Formations (Upper Miocene - Recent)
- Represents upper Miocene deposits of the Aquia Formation and the Pensauken Formation along with recent deposits of the Woodland Terrace and Mount Laurel Sand Formations.
- Includes deposits of quartz gravel, gravelly sand, and sandstone. Deposits are generally well sorted and massive.

B Quaternary Formations
- Represents deposits of the Columbia, Hornerstown, and Wilson Formations that accumulated as glaciolacustrine and glacial outwash deposits.
- The Columbia Formation is a glaciolacustrine deposit that is generally fine-grained and massive.
- The Hornerstown Formation is a glacial outwash deposit that is generally coarse-grained and massive.
- The Wilson Formation is a paleosol that is generally fine-grained and massive.

MAP SYMBOLS

- Line of section: The line of section symbol indicates the location of a section through the map area.
- Boundaries: The boundary symbol indicates the location of a boundary between different map units.
- Contours: The contour symbol indicates the location of a contour line.
