Alluvium
Harpers Formation

Benevola Member, except within polished slabs where faint
burrows, especially near top of formation. Quartzites
fine to medium grained, highly argillaceous, and contain
typically obscures bedding. Metasandstones are commonly
ranges from 500 to 800 feet (150 to 245 m).

Buzzard Knob Member

Light-gray to white, massive to poorly bedded, highly fractured,
Formation was divided into four members by Brezinski (1992).

Estimates range from 1,500 to 3,000 feet (450 to 1,000 m).

Medium- to thick-bedded, medium-to coarse-grained,
carbonates, and burrow-mottled dolomitic limestone. This unit
ranges from 500 to 800 feet (150 to 245 m).
